PERFORMANCE & ROBUSTNESS REPORT · BACKTEST 2015–2025

20k5ers Bot

Automated FX, index and oil strategy built on the **MM Blueprint** trading method · tested under prop-firm rules

NOT VALID - DO NOT USE OR SHARE. The backtests behind this report let the strategy see candles that had not finished yet (a daily candle at midnight already contained the whole next day's range). With completed candles only, the same strategy earned about $0 per year in five tested years (-$4k to +$10k, against $500k-$750k shown here). All figures below are inflated by this look-ahead. A corrected study follows.

01 ROBUSTNESS

	TEST	SIZE	RESULT
PASS	Challenge, 2 steps (8% then 5%), random start dates	100 challenges	**94 passed** · 3 breached · 3 too slow · median **21 days** to funded (step 1 and 2 both at 1.8% risk; 2.7% in step 1 gave 95 passed, median 20)
PASS	Funded account, random start, 3 years non-stop	20 accounts	**20 of 20 survived** · avg $27,443/month paid out (without climb cap: 12 of 20, $17,596/month)
PASS	Funded account, random start, 5 years non-stop	10 accounts	**9 of 10 survived** · avg $25,565/month paid out (without climb cap: 8 of 10)
PASS	Funded account, random start, 8 years non-stop	10 accounts	**9 of 10 survived** · avg $26,819/month paid out (without climb cap: 5 of 10)
NOTE	Funded failures with the climb cap	40 accounts	**2 of 40 failed**: French-election weekend gap, Apr 2017 (7.47% day) and Covid volatility, Apr 2020 (5.35% day). Without the cap: 15 of 40.
PASS	Full 11-year run, one account (page 2)	1 account	No breach · worst daily loss **4.57%** (limit 5%) · deepest drawdown **5.34%** (limit 10%)
PASS	Instruments: remove one at a time	502 account-years	29 instruments kept. Gold, silver, S&P 500, Nasdaq, CAD/JPY, BTC and ETH dropped.
NOTE	Held-out test windows (not used for tuning)	140 runs	Alternative “safer” setup: 2 breaches vs 2 for current. No improvement, rejected.
PASS	Swiss franc shock, 15 Jan 2015	all variants	With the peg guard **no account fails** that day.
PASS	Trading costs	every run	Real spreads and slippage per instrument in every test.
NOTE	Live or demo track record	—	Not yet. All figures are backtests on the years the bot was tuned on.

Live settings: risk 1.8% in challenge step 1, 1.8% in step 2, **1.8% funded below $300k (climb cap)**, 0.6% from $300k. No new trades after a 2.5% daily loss, everything closed at 3.2%, peg guard on. In total 915 setups tuned and 1,236 separate validation backtests, all with real trading costs.

02 COMPARED WITH THE AVERAGE ALGORITHM

APPROACH	SHARPE	MAX DRAWDOWN	GREEN MONTHS	CHALLENGE PASS
This bot (backtest, prop rules)	**6.0**	**5.3%**	**97%**	**94%**
S&P 500 buy & hold (2015–2025)	≈ 0.7	≈ 34%	≈ 65%	n/a
Systematic hedge funds (index average)	≈ 0.5 – 0.8	≈ 10 – 20%	≈ 60%	n/a
Trend-following CTAs (index)	≈ 0.3 – 0.6	≈ 15 – 20%	≈ 55%	n/a
Retail prop-firm traders	–	–	–	≈ 5 – 10%
Medallion fund (best known, reported)	> 2	–	–	n/a

Other rows are approximate public reference figures, not measured on this data. A backtest Sharpe far above the best real funds partly reflects in-sample tuning: expect live results to be lower. The gap that matters is the drawdown: this bot is built to stay inside a 5% daily and 10% total limit.

03 FULL 11 YEARS, YEAR BY YEAR

One funded account, started 2 Jan 2015 with **$50,000**, traded non-stop to 31 Dec 2025 with live settings and The5ers rules. Gross profit is trading profit on the firm's account before commissions; "Paid to you" is your share after the 80–100% profit split.

YEAR	ACCOUNT START	ACCOUNT END	TRADES	WIN RATE	GROSS PROFIT	PAID TO YOU	GREEN MONTHS	WORST DAY
2015	$50k	$400k	1,134	55.3%	$222,913	**$177,648**	11/12	-3.80%
2016	$400k	$500k	1,065	53.7%	$380,410	**$391,144**	12/12	-2.65%
2017	$500k	$500k	967	53.8%	$391,245	**$356,171**	12/12	-2.09%
2018	$500k	$500k	936	53.0%	$367,372	**$357,809**	12/12	-1.46%
2019	$500k	$500k	1,048	52.2%	$380,662	**$354,890**	12/12	-1.47%
2020	$500k	$500k	1,201	53.0%	$404,055	**$402,507**	11/12	-2.72%
2021	$500k	$500k	1,161	52.1%	$328,252	**$303,788**	12/12	-2.14%
2022	$500k	$500k	1,021	52.6%	$386,627	**$406,924**	12/12	-3.24%
2023	$500k	$500k	1,091	51.5%	$435,450	**$405,789**	12/12	-1.08%
2024	$500k	$500k	983	48.6%	$340,782	**$352,369**	10/12	-2.48%
2025	$500k	$500k	1,528	52.2%	$541,338	**$509,697**	12/12	-2.77%
2015–2025	**$50k**	**$500k**	**12,135**	**52.6%**	**$4,179,106**	**$4,018,736**	**128/132**	**-3.80%**

Average paid out **$30,445 per month**. From 2016 the account sits at the $500k cap, so profit stays level instead of compounding. This start date was favourable; over random start dates the 3-year average was $27,443 per month.

04 WHY THIS BOT IS DIFFERENT

Built on a method that was traded by hand
The rules come from the MM Blueprint course, a discretionary method used live on charts, not indicators fitted to data.

Designed around the prop-firm limits
No new trades after a 2.5% daily loss and everything closed at 3.2%, well before the 5% limit; more risk only in calm markets; a drawdown ladder, climb cap and smaller step-2 risk.

Diversified and tested per instrument
29 instruments; each was removed one at a time to prove it adds value. Seven that did not were dropped.

Stress-tested, not just backtested
Random start dates, held-out windows, the 2015 franc shock, real spreads and slippage: 1,236 validation runs.

05 DEVELOPMENT HISTORY

9 Jan 2026
first commit of the bot

9.5 months
of development to 23 Oct 2026

3,094
commits in the main repository

118
days with code changes

Before that: the MM Blueprint course and years of manual chart trading, which the bot's rules are based on.

Prop-firm rules limit this strategy. The 5% daily and 10% total limits force small risk per trade and a $500k ceiling. Trading own capital without these limits opens many more optimisations: higher or adaptive risk, no account cap, compounding and longer holding times.
