STRATEGY FACTSHEET · THE5ERS 2-STEP CHALLENGE & FUNDED ACCOUNT

20k5ers Bot Factsheet

Multi-asset FX, index and oil bot. 26 forex pairs plus UK100, Brent and WTI.
Backtested on M15 data, Jan 2015 – Dec 2025, with realistic spreads.

Data window 2015-01-02 → 2025-12-31
Bars: M15 · 29 instruments
Prepared 2026-10-23

CHALLENGE PASS RATE	CHALLENGE BREACH	DAYS TO FUNDED	FUNDED SURVIVAL, 3 YR	AVG PAYOUT / MONTH	PROFIT FACTOR
95%	**2%**	**20**	**20/20**	**$27.4k**	**2.17**
100 random start dates, both steps	fee lost; 3% too slow (>75 days/step)	median · p10 9 · p90 51	with climb cap · 12/20 without	random 3-yr accounts from $50k, your share	12,135 trades, 11-yr continuous run

Configuration

per account phase

PHASE	TARGET	RISK / TRADE	STATUS
Challenge step 1	8%	2.7%	LIVE
Challenge step 2	5%	1.8%	LIVE, AUTO PER LOGIN
Funded, below $300k	–	1.8%	TESTED, NOT YET LIVE
Funded, $300k and up	–	0.6%	LIVE

Risk scales ×1.45 in calm markets and ×0.64 in volatile ones, and drops to 0.4% after a 1.5% drawdown. The bot stops for the day at a 3.5% daily loss, below The5ers' 5% daily limit and 10% total limit. A peg guard blocks trading in a currency pinned by its central bank (SNB 2015 case). It is live.

Testing done

validation runs

STUDY	RUNS
Parameter optimisation trials	915 configs
Ticker leave-one-out study	502 account-years
Held-out confirmation windows	140
Random-start challenges	492
Random-start funded accounts	100
11-year runs with full trade lists	2
Validation backtests in total	**1,236**

Each validation backtest is a full simulated challenge step or funded account on M15 bars, with spreads, slippage, gapped stops and the 5ers payout ladder.

Funded account, random starts

continuous, from $50k

SETUP	SURVIVE	AVG / MONTH	MEDIAN 3-YR	WORST DAY
Current, 3 yr (20)	12/20	$17,600	$980k	6.97%
Climb cap, 3 yr (20)	20/20	$27,400	$977k	4.79%
News close-out only (20)	16/20	$23,700	$1,031k	8.64%
Climb cap + news (20)	19/20	$27,800	$1,072k	5.06%
Current, 5 yr (10)	8/10	$22,700	$1.63M (5 yr)	6.08%
Current, 8 yr (10)	5/10	$14,800	$2.70M (8 yr)	7.61%

Without the climb cap, all 15 deaths fell in the first 160 days, on news shocks: US jobs report, CPI, ECB, US and French elections, the 2022 GBP crash. No account died after its first half year.

Quant statistics

11-yr continuous account

METRIC	CURRENT	CLIMB CAP
Total withdrawn	$3.97M	$4.02M
Trades	12,188	12,135
Win rate	52.5%	52.6%
Profit factor	2.15	2.17
Avg win / avg loss	$1,207 / −$623	$1,216 / −$621
Payoff ratio	1.94	1.96
Expectancy per trade	$339	$344
Longest losing streak	13	13
Green days / green months	69.0% / 96.2%	69.1% / 97.0%
Max daily DD (limit 5%)	4.19%	4.57%
Max total DD (limit 10%)	5.51%	5.34%
Daily-loss halts	35	15
Sharpe / Sortino	5.4 / 12.0	6.0 / 14.3
Median holding time	18 h	18 h

The account starting January 2015 is a lucky path: it was past $300k before the 7 August 2015 shock. The random-start table is the fairer picture.

Compared with other approaches

reference figures

APPROACH	SHARPE	MAX DD	PASS RATE
This bot, backtest	5.4 – 6.0	5.3%	95%
Retail prop-firm traders	–	–	≈ 5 – 10%
S&P 500 buy & hold	≈ 0.4 – 0.6	≈ 34 – 55%	n/a
Trend-following CTAs	≈ 0.3 – 0.6	≈ 15 – 20%	n/a
Medallion (reported)	> 2	–	n/a

The other rows are approximate public reference figures, not measurements on this data. A backtest Sharpe several times higher than the best-known real fund is a sign of in-sample optimism. It is not a forecast. Treat the bot's numbers as an upper bound until a demo or live track record confirms them.

Robustness checks

PASS Realistic costs: per-instrument spreads capped at the bot's own 3.0-pip filter. Without costs, results were overstated.

PASS SNB franc shock, 15 Jan 2015: with the peg guard no variant dies that day. Without it, survival was path luck.

PASS Paired tests on identical start dates for every change (step-2 risk, climb cap, news close-out).

WEAK 24 Aug 2015 (China crash) leaves a thin daily margin when several yen positions point the same way.

PASS Ticker selection by leave-one-out: removing any one instrument, or the USD/JPY + AUD/JPY pair together, did not improve results beyond noise. Silver, gold, S&P 500, Nasdaq, CAD/JPY, BTC and ETH stay out.

PASS Summer/winter time: rollover, de-risk and daily-limit reset run on New York time and self-check the broker clock at start-up.

WEAK A tuned "survival" config did not beat the incumbent on 70 held-out windows (2 vs 2 breaches, McNemar p = 1.0). Rejected.

OPEN No live or demo track record yet. All figures are backtests on the same 11 years the bot was tuned on, so expect live results to be lower.

Sources: backtest outputs in `backtest/output/doe/wall5/` (random_study, step2_risk, variants, symbol_loo_real, confirm_candidate, quant). Payouts are the trader's share after The5ers' profit split (80–100% by level), before tax. Funded level capped at $500k in the simulation. Past and simulated performance does not guarantee future results.
