20k5ers Bot · Test Results

Automated FX, index and oil strategy built on the **MM Blueprint** method. Backtested 2015–2025 on 15-minute data.

Based on	prop-firm rules (The5ers)	**Start capital**	$50,000 funded account
Daily loss limit	5%	**Maximum loss**	10%
Challenge	step 1: +8% · step 2: +5%	**Profit split**	80–100% to the trader
Scaling	account grows with profit, capped at $500k	**Instruments**	26 FX pairs, UK100, Brent, WTI

95%
challenges passed (95 of 100)

20 days
median time to funded

4.19%
worst daily loss in 11 years (limit 5%)

$3.97M
paid out to trader in 11 years from $50k

1 · Robustness

TEST	SIZE	RESULT
Challenge, 2 steps (8% then 5%), random start dates	100 challenges	**95 passed** · 2 breached · 3 too slow (>75 days per step) · median 20 days to funded
Funded account, random start, 3 years non-stop	20 accounts	**12 of 20 survived** with live settings · **20 of 20** with the climb cap (1.8% risk below $300k)
Funded account, random start, 5 years non-stop	10 accounts	**8 of 10 survived** (live settings)
Funded account, random start, 8 years non-stop	10 accounts	**5 of 10 survived** (live settings)
When funded accounts failed	15 failures	All in the **first 160 days**, below $300k, on news shocks. **None after the first half year.**
Full 11-year run (page 2)	1 account	No breach · worst daily loss **4.19%** (limit 5%) · deepest drawdown **5.51%** (limit 10%)
Instruments: remove one at a time	502 account-years	29 instruments kept. Gold, silver, S&P 500, Nasdaq, CAD/JPY, BTC and ETH dropped.
Held-out test windows (not used for tuning)	140 runs	Alternative “safer” setup: 2 breaches vs 2 for the current setup. No improvement, rejected.
Swiss franc shock, 15 Jan 2015	all variants	With the peg guard (live) **no account fails** that day.
Trading costs	every run	Real spreads and slippage per instrument included in every test.
Parameter tuning	915 setups	Entry, filters, risk, drawdown ladder, daily stop.

In total: 915 setups tuned and 1,236 separate validation backtests, every one with real trading costs.

2 · Full 11 years, year by year

One funded account started on 2 Jan 2015 with **$50,000** and traded non-stop until 31 Dec 2025, with live settings and The5ers rules. “Gross profit” is trading profit on the firm's account before commissions ($108k over 11 years); “Paid to you” is your share after the profit split.

YEAR	ACCOUNT START	ACCOUNT END	TRADES	WIN RATE	GROSS PROFIT	PAID TO YOU	GREEN MONTHS	WORST DAY
2015	$50k	$350k	1,173	55.2%	$175,728	**$138,896**	10/12	-3.88%
2016	$350k	$500k	1,079	53.5%	$358,643	**$322,518**	12/12	-2.48%
2017	$500k	$500k	968	53.8%	$392,091	**$406,907**	12/12	-2.05%
2018	$500k	$500k	935	52.9%	$369,831	**$353,985**	12/12	-1.45%
2019	$500k	$500k	1,048	52.2%	$380,894	**$359,516**	12/12	-1.45%
2020	$500k	$500k	1,200	53.1%	$405,150	**$409,580**	11/12	-2.64%
2021	$500k	$500k	1,162	52.1%	$345,340	**$357,524**	12/12	-2.28%
2022	$500k	$500k	1,021	52.6%	$385,065	**$353,552**	12/12	-3.21%
2023	$500k	$500k	1,091	51.5%	$435,443	**$405,798**	12/12	-1.08%
2024	$500k	$500k	983	48.6%	$340,782	**$352,369**	10/12	-2.48%
2025	$500k	$500k	1,528	52.2%	$541,338	**$509,697**	12/12	-2.77%
2015–2025	**$50k**	**$500k**	**12,188**	**52.5%**	**$4,130,304**	**$3,970,343**	**127/132**	**-3.88%**

Average paid out: **$30,078 per month** over 132 months. From 2016 the account sits at the $500k cap, so yearly profit stays level instead of compounding. Worst day = largest closed loss in one day as % of the account. Daily-loss stop triggered 35 times in 11 years; the 5% and 10% limits were never hit.

This start date was a good one: the account was past $300k before the first big shock (Aug 2015). Over 20 random start dates, 12 of 20 survived 3 years with live settings and 20 of 20 with the climb cap; the average payout was then $17,600 (live) or $27,400 (climb cap) per month.

> **Prop-firm rules limit this strategy.** The 5% daily and 10% total limits force small risk per trade and a $500k ceiling. Trading own capital without these limits opens many more optimisations: higher or adaptive risk, no account cap, compounding, longer holding times.

Source: backtest outputs in backtest/output/doe/wall5/ (random_study, variants, symbol_loo_real, confirm_candidate, quant/current). Backtest on the same 11 years the bot was tuned on; no live or demo track record yet. Past and simulated performance does not guarantee future results.
